PROFESSIONAL SUMMARY

Senior Data & BI Architect with 17+ years of experience designing and delivering enterprise-scale data, analytics, and business intelligence platforms across manufacturing, retail, banking, and hospitality domains. Specialized in Microsoft Fabric and **Databricks Lakehouse Platform** implementations, with strong expertise in **Delta Lake architecture**, **Unity Catalog** governance, **Databricks SQL, Databricks Workflows, Structured Streaming, Auto Loader**, and performance optimization using **Databricks Photon** across Azure and AWS environments. Proven leader in shaping enterprise data and BI roadmaps, establishing Data & BI Center of Excellence (CoE) standards, and enabling organizations to scale secure, governed, and high-performance cloud analytics platforms.

CORE SKILLS

Databricks Lakehouse Platform | Delta Lake | Unity Catalog | Databricks SQL & Workflows | Microsoft Fabric | Power BI | Tableau | Data Architecture | Data Governance | Performance Optimization

EXPERIENCE

Solution Architect – Kanerika (Jul 2025 – Present)

- Architect and own enterprise Data & BI platforms leveraging Microsoft Fabric and the Databricks Lakehouse Platform to modernize analytics for a global manufacturing client.
- Design end-to-end Lakehouse architecture including ingestion, transformation, Delta Lake-based Bronze-Silver-Gold modeling, semantic layers, and reporting aligned with scalability, security, and governance standards.
- Lead Databricks cloud data platform initiatives, implementing Delta Lake architectures, Unity Catalog governance, Databricks SQL serving layers, and Workflows-based orchestration for advanced analytics workloads.
- Design and optimize Spark workloads using Structured Streaming, Auto Loader, and Databricks Photon to enable high-performance batch and near real-time processing across Azure and AWS environments.
- Define and enforce data engineering and BI architecture standards, including governance, cost optimization, and performance best practices to ensure long-term platform sustainability.
- Mentor engineers and collaborate with business and technology stakeholders to translate requirements into scalable, secure, and future-ready Lakehouse architectures.

Senior Data / BI Architect – Cognizant (Jan 2022 – Jul 2025)
Client: MGM Resorts International

- Led architecture and delivery of Azure-based enterprise analytics platforms leveraging the Databricks Lakehouse Platform, ensuring high availability, scalability, and performance.
- Designed and implemented multi-source ingestion and transformation pipelines using Apache Spark and Delta Lake, reducing overall data processing time by 30% and improving data reliability.
- Built scalable Bronze–Silver–Gold data models to standardize enterprise data processing and support downstream BI and reporting use cases.
- Designed Databricks SQL serving layers integrated with enterprise BI platforms to enable optimized and governed analytics consumption.
- Implemented batch and near real-time ingestion frameworks using Structured Streaming to support operational and analytical reporting needs.
- Adopted Databricks Workflows for job orchestration and pipeline scheduling, improving reliability and operational monitoring.
- Contributed to governance modernization initiatives, supporting adoption of Unity Catalog for centralized data access management and enhanced security controls (post-2023).
- Established enterprise data quality and governance frameworks, reducing data errors by 25% and increasing trust in analytics.
- Played a key role in Data & BI CoE initiatives, standardizing architecture patterns, performance optimization strategies, and engineering best practices across teams.
- Designed and delivered BI and Databricks enablement programs, accelerating adoption of Lakehouse-based analytics and self-service reporting.

BI & Data Architect – Cognizant (Aug 2018 – Dec 2021)
Client: PepsiCo Inc.

- Architected BI and analytics solutions supporting global business stakeholders
- Led **Tableau to Power BI migration**, defining architecture, governance, and performance standards
- Designed optimized semantic models enabling scalable self-service BI
- Acted as primary POC for BI architecture and data integration initiatives

BI Architect / Senior BI Developer – Cognizant (Jan 2015 – Jul 2018)
Clients: Wells Fargo, UBS, Novartis

- Designed and delivered enterprise dashboards and reporting solutions across banking and life sciences domains
- Led BI solution design, mockups, and stakeholder engagement
- Established visualization, performance tuning, and development best practices
- Mentored junior BI developers and enforced BI standards

EARLY CAREER EXPERIENCE

Developer – Cybage (Sep 2008 – Dec 2014)

- Built and supported enterprise web applications for insurance domain clients using **Perl, .NET, Classic ASP, and JavaScript** during the first phase of tenure
- Transitioned into data and analytics roles over the later years, working on **Tableau-based BI solutions** and **Big Data platforms (Hadoop ecosystem)**
- Supported reporting, data analysis, and early analytics use cases, establishing a strong foundation for a career in BI and data architecture
- Worked in Agile delivery models, supporting production deployments, migrations, and defect resolution

EDUCATION

Diploma in Advanced Computing – CDAC

Bachelor's in Electronics & Instrumentation – VREC

CERTIFICATIONS

- Databricks Certified Professional Data Engineer
- DP-700: Microsoft Fabric Analytics Engineer Associate
- PL-300: Microsoft Power BI Data Analyst
- Microsoft Azure Data Engineer Associate
- Tableau Desktop Certified Professional
- Tableau Server Qualified Associate
